

# Personal Social Analytics

## Reputation Analysis for Social Computing

Anton Kolonin  
[akolonin@aigents.com](mailto:akolonin@aigents.com)

# Standing Questions

- Does one feel like being a part of huge, planet-size computer, performing some unknown task?
- Does one want to have understanding of the programs being uploaded to it and executed by us?
- Does one want to have a bit of control over the tasks being executed?

# What is the nature of Intelligence?

Self-aware being evolved in the course of development interacting with surrounding environment, like thinking ocean “Solaris”?

Phenomenon of cooperative behavioral patterns evolved in the course of social collaboration between multiple individual entities?

# Human Brain and Human Community

~80 billion neurons,  
~16 – in neocortex

~8 billion people on Earth,  
~3.5 – connected online

~100 m/s – speed of neural signal transmission

~300000000 m/s – speed of electromagnetic waves

~1 ms – time to transmit signal between brain hemispheres

~100 ms – time to transmit signal between earth hemispheres

~1 ns – time to transmit signal between columns in the cortex

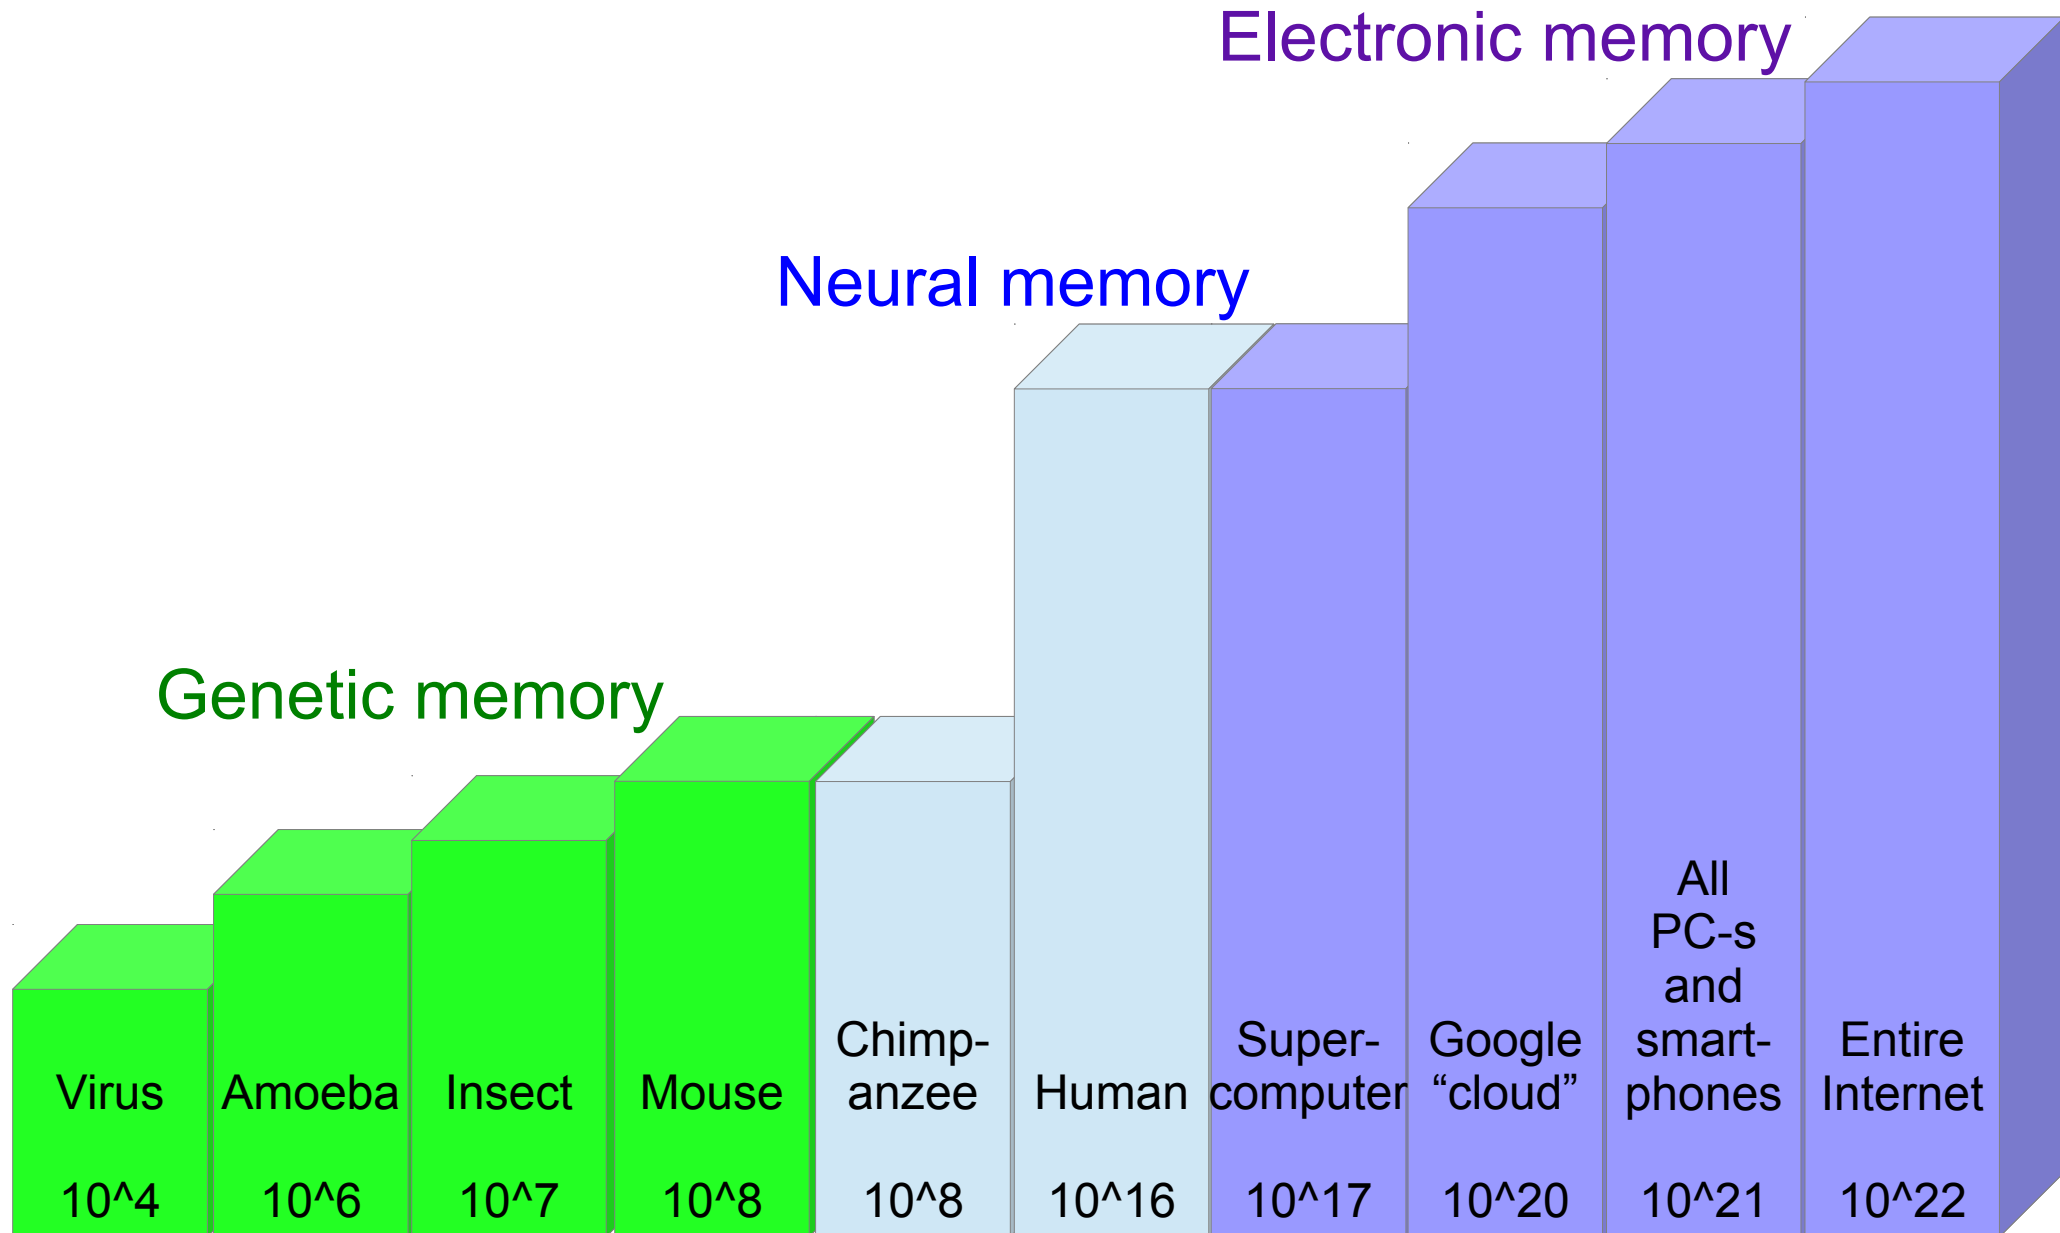

~1 ns – time to transmit signal within data center

Control roles of cells in human body is differentiated to cells of central neural system (~0.2% of total amount) and the rest

Control role of humans in society is differentiated to managing elites (~0.7% USD millionaires of populations) and manageable audience

# Evolution of memory capacity, bits

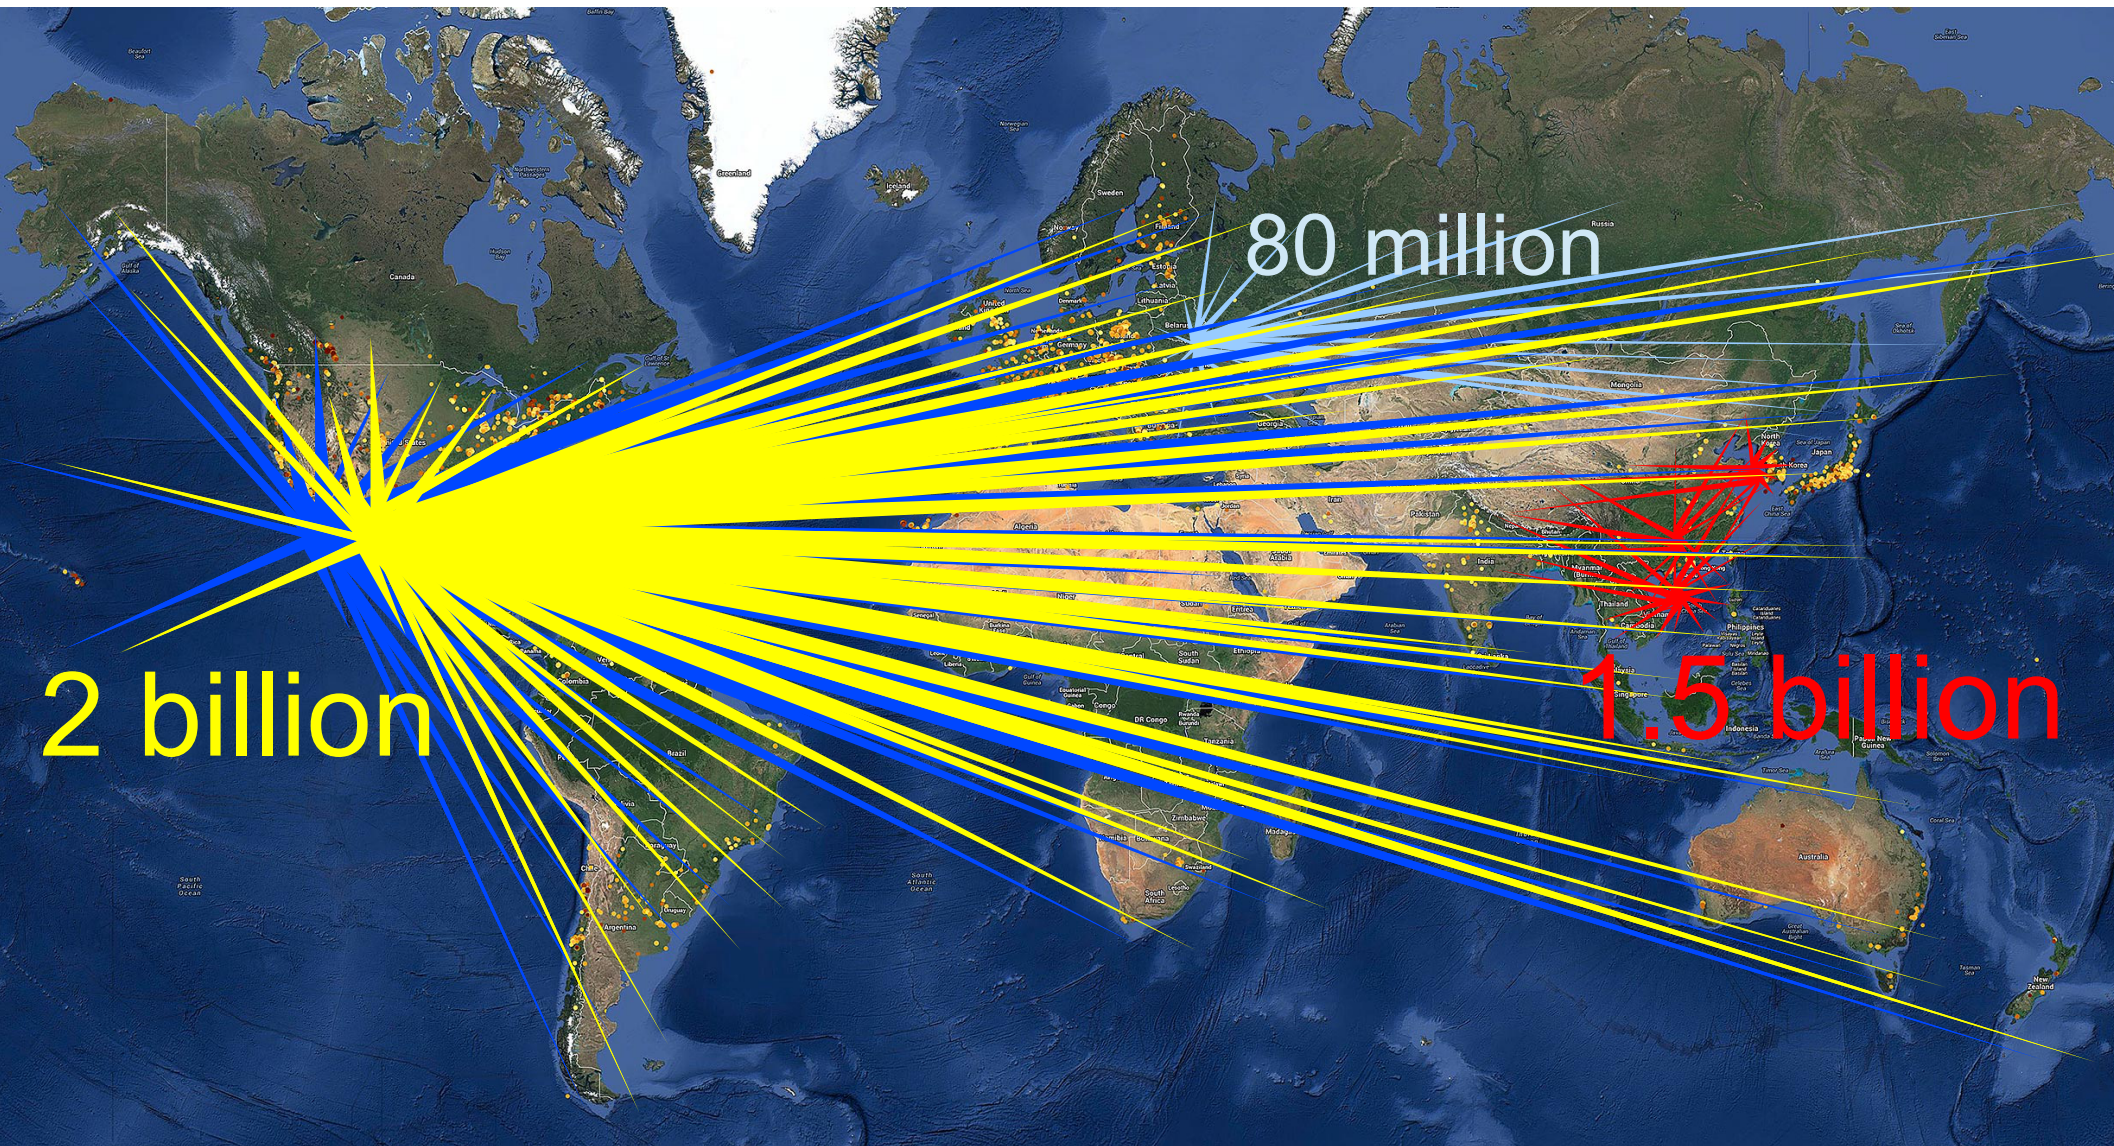

# Hybrid human-machine social computer ("global brain") overall architecture

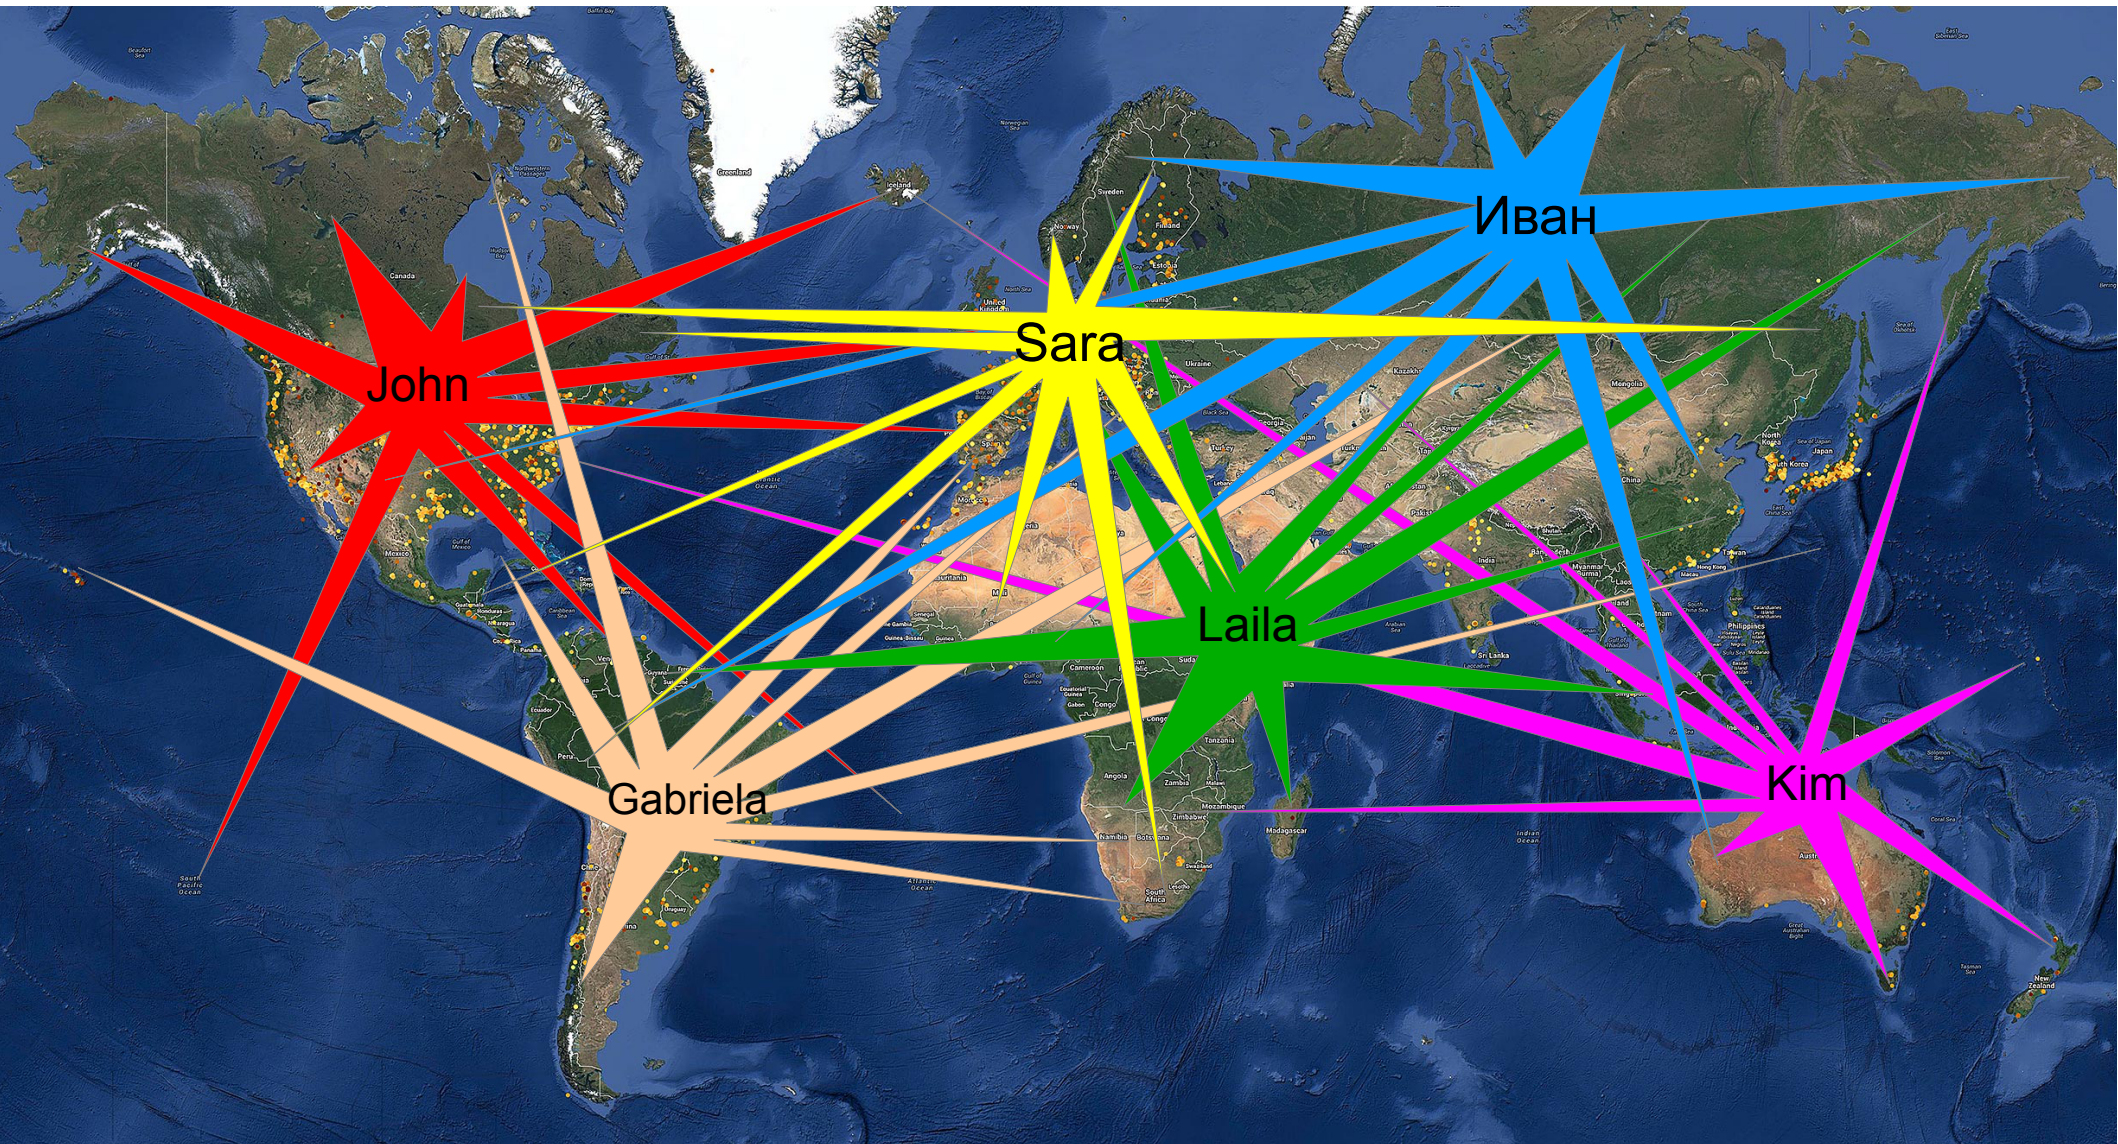

People “monthly connected” to “planetary global brains”  
Google+Facebook – worldwide, VK – in Russia  
WeChat+Baidu+QQ etc. - in China

# Challenge: provide every user with "personal agent of global brain"?

# Aigents Social Computing

provides “magic mirror” in the world of social and informational networks to recognize your preferences, let you know your friends and find what you need

## Case 2: Helping users to understand themselves better and perform more efficiently online – using their tracks in social networks and online resources, capture their interests, relationships, communication patterns and social structures.

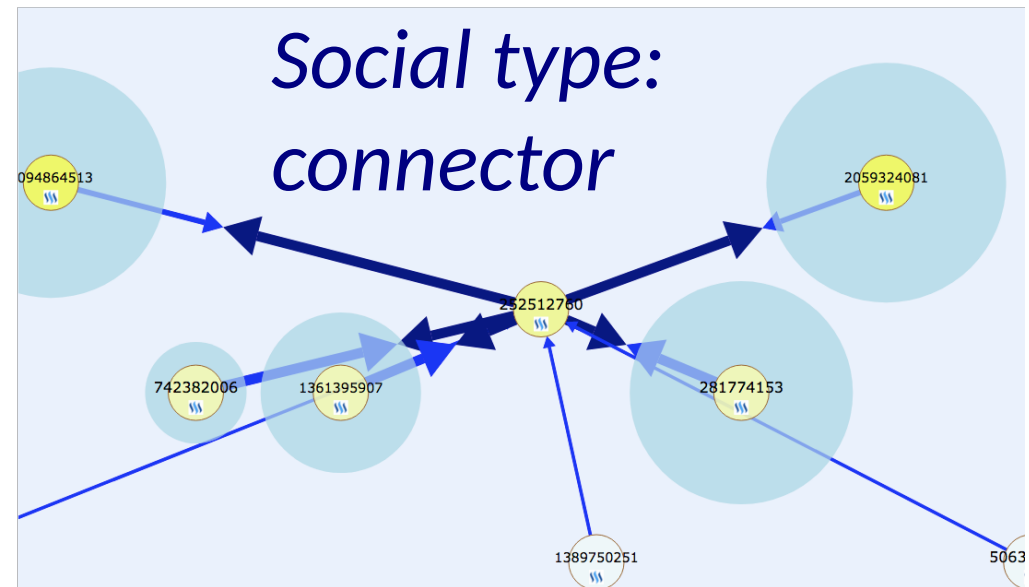

*Social type:  
follower*

*Social type:  
peer*

*Social type:  
opinion leader*

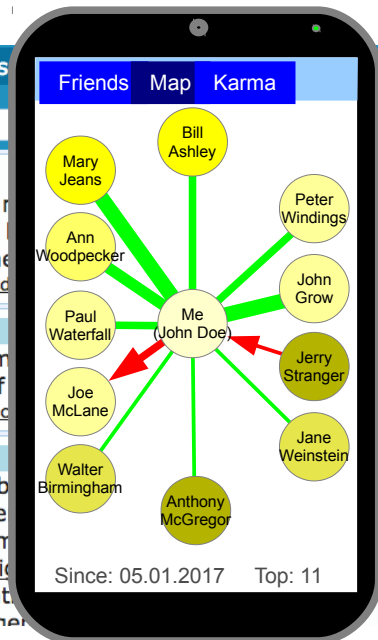

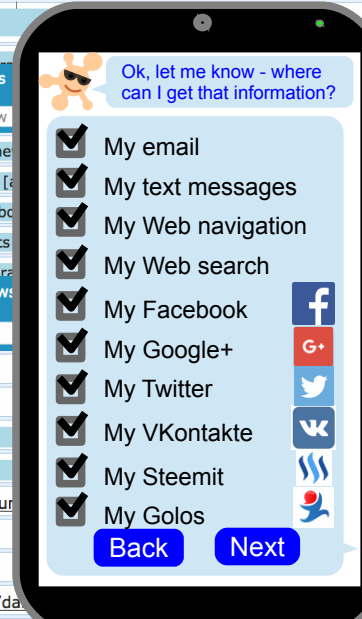

*Social type:  
connector*

# Case 3: Encouraging users to conduct positive and effective communications with partners while guarding users from being manipulated themselves or being offensive to others.

I connect my “virtual agent” to my social networks and communication channels and let it learn about my partners and preferences.

“Agent” extracts information from networks and online communications automatically, analyses all posts, comments and messages and alerts once there are important messages coming in or out – encouraging and positive or manipulative and offensive.

# Case 4: Providing “proof-of-reputation” consensus for governance in blockchain based systems, resistant to takeover and scam attacks.

## Proof-Of-Work

Those who own more computing power govern the network.

## Proof-Of-Stake

Those who have more money govern the network.

## Proof-Of-Reputation

$$R_i = \sum_t \sum_j (R_j * V_{ijt})$$

Those who earn deeper reputation and greater long-term audience base govern the network.

# Case 5: Highly Personalized News Aggregator monitoring web pages and extracting textual information with account to Personal and Social relevances

Screenshot of the Aigents web application interface. The browser address bar shows <https://aigents.com>. The navigation bar includes links for Aigents, Topics, Sites, News (highlighted with a yellow circle), Friends, Graph, and Chat. A search bar contains the text 'trump'. The main content area displays a list of news articles, each with a date filter (e.g., 'today', 'yesterday', '2017-09-14') and a green highlight bar. The first article, dated 'today', features an American flag icon and discusses a report about Russian president Vladimir Putin's involvement in the 2016 election. The second article, also dated 'today', features a person on a beach icon and discusses business markets and politics. The third article, dated 'yesterday', features a group of people icon and discusses financial entanglement between Russia and President Trump. The fourth article, dated '2017-09-14', features a person in a red jacket icon and discusses President Trump's sharp attack on Thursday. The fifth article, dated '2017-09-10', is partially visible. A blue arrow points from the 'Me' character to the search bar, and a green arrow points from the 'Friends' characters to the 'News' link in the navigation bar.

# Takeaways

- We are parts of world-size machine, computing and redistributing attention, reputation, influence and power of brands, business and physical entities.
- The larger social graph is under control, the more impact on the world can be accessed, yet most of us lack tools of such control.
- Try [Aigents](#) software for personal social analytics and help us to make it better.
